Education

Master of Science — Georgia Institute of Technology — **Atlanta,GA**

- M.S Computer Science

Bachelor of Science — California State University East Bay — **Hayward,CA**

- B.S Computer Science, B.S Chemistry

Experience

Lead AI Solutions Engineer — TDengine — Palo Alto,CA — **08/2025-Current**

•Led technical solution design and deployment for **Fortune 500 customers across North America**, including organizations such as **McDonald's**, delivering scalable industrial data infrastructure using TDengine TSDB and IDMP..
•Worked directly with enterprise engineering and operations teams to **architect AI-ready data historian solutions**, integrating OT data sources such as
•OPC-UA, MQTT, and industrial telemetry into modern analytics platforms.
•Guided customers through **end-to-end solution delivery**—from data modeling and ingestion pipelines to real-time analytics, dashboards, and AI-driven operational insights.
•Partnered with strategic clients to **modernize legacy historian environments**, improving performance, scalability, and cost efficiency for large-scale industrial and infrastructure monitoring deployments.

Software Engineer(Agentic AI) — C3.ai — Redwood City, *CA* — **05/2024 - 09/2025**

•**Developed full-stack solutions** using **JavaScript, Python, and React**, designing and implementing user-friendly interfaces and backend APIs that support seamless data integration and high-performance application features.
•**Designed, trained, and deployed AI/ML models** tailored for specific use cases, including predictive analytics and data-driven insights, improving decision-making processes and enhancing the overall intelligence of applications.
•**Implemented DevOps practices**, such as continuous integration and automated testing, to streamline the deployment pipeline, reduce system downtime, and ensure smooth updates for both development and production environments.
•**Built Agentic AI pipeline tools** that helped developers accelerate the development process by 50%, streamlining **model training and deployment**.
•Integrated **agentic tooling** and **advanced prompting techniques** to streamline workflows, automate repetitive tasks, and enhance developer productivity.

Software Engineer — Meta — Burlingame, *CA* — **05/2024 - 05/2024**

•Built performance-critical components for Meta Quest applications using **C++ and Rust**, optimizing real-time rendering and system-level interactions to improve latency and runtime efficiency in immersive environments
•Created **Python automation tools** for internal testing and telemetry analysis, accelerating debugging workflows and improving release reliability for immersive applications

Founding AI Engineer — Soundromeda — Los Angeles, *CA* — **12/2022 - 01/2024**

• Promoted to Head of **AI** due to outstanding contributions in **AI Innovation** and **Strategy**.
• Designed, trained, and deployed robust **AI** models using **TensorFlow** and **PyTorch**, ensuring high accuracy and efficiency for various tasks in **machine learning**.
• Applied advanced **AI** algorithms to create emotionally resonant songworlds, utilizing trained models for sophisticated **dataset processing** and enhancing the auditory experience**.**
•Led the creation and implementation of cutting-edge **AI** solutions, continuously pushing technological boundaries to achieve significant advancements and impactful results in **AI** engineering.

Projects

• **RuneOS** : Extensive experience with RuneOS, a performance-focused minimal **OS** built on **Rust**.**(10/2022)**
• **Prompt Craft** : a **Python**-powered feature within an **AI-driven** Dungeons and Dragons (D&D) system. PromptCraft autonomously generates dynamic storytelling prompts, fostering creativity and unpredictability for an enhanced **user experience** during gameplay.**(05/2023)**
• **XR Learning Tools:** Developed immersive **XR learning applications with Meta Quest, HTC Vive Pro Eye, and Unreal Engine 5**, enabling interactive training experiences and advanced learner engagement. **(06/2023)**
• **Emotion Tracker** : Built an eye-tracking emotion detection system using Python, combining **computer vision (OpenCV)** and **machine learning models** to analyze gaze patterns and classify emotional states in real time.**(08/2024)**
• **Reefly:** Built with **TypeScript** and powered by advanced computer vision **ML models and intelligent LLM routing system**, Reefly delivers real-time aquarium insights and currently serves nearly 100 active users each month.**(01/2026)**

Skills

• Python | C++ | Rust | C | Java | JavaScript | C# | React | Vue | Redux | jQuery | SQL | NoSQL | Git | Perl | Unreal Scripting
• Deep Learning | TensorFlow | PyTorch | spaCy | Scikit-learn | OpenCV | Pandas | NumPy | Data Pipelines | Prompting
• Microservices | Distributed Systems | Backend | Frontend | Full-Stack | Cloud (Azure, AWS) | CI/CD | Docker | Unit Testing
